

# GENERAL SERVICES ADMINISTRATION

*Using the GSA Schedule Contract*

Obtaining our services has gotten almost easy using the Professional Engineering Services (PES) GSA schedules.

Under this multiple award contract, GSA has determined the prices on all of the Federal Supply Schedules to be fair and reasonable based on their competition prior to award (FAR 8.404). There is no need to synopsise your requirements in the FedBizOpps or compete a new contract. Placing an order is fairly simple; after reviewing three Contractor Schedules, you determine which Schedule holder offers the best overall value to your Agency and then fill out the procurement form used by your Agency and submit it to your contracting office.

## *Services are available under the following Special Item Numbers (SINs)*

### **871-1 Strategic Planning for Technology Programs/Activity.**

Services under this item involve the definition and interpretation of high-level organizational engineering performance requirements such as projects, systems, missions, etc. and the objectives and approaches to their achievement. Typical associated tasks include, but are not limited to an analysis of mission, program goals and objectives, requirements analysis, organizational performance assessment, special studies and analysis, training, privatization and outsourcing.

### **871-4 Test and Evaluation.**

Services required under this item involve the application of various techniques demonstrating that a prototype system (subsystem, program, project, or activity) performs in accordance with the objectives outlined in the original design. Typical associated tasks include, but are not limited to, testing of a prototype and first article(s) testing, environmental testing, independent verification and validation, reverse engineering, simulation and modeling (to test the feasibility of a concept), system safety, quality assurance, physical testing of the product or system, training, privatization and outsourcing.

### **871-5 Integrated Logistics Support.**

Services required under this item involves the analysis, planning, and detailed design of all engineering specific logistics support including material goods, personnel, and operational maintenance and repair of systems throughout their life cycles.

### **871-6 Acquisition and Life Cycle Management.**

Services required under this item involve all of the planning, budgetary, contract and system/program management execution functions required to procure and/or produce, render operational and provide life cycle support (maintenance, repair, supplies, engineering specific logistics) to technology-based systems, activities, subsystems, projects, etc. Typical associated tasks include, but are not limited to operation and maintenance, program/project management, technology transfer/insertion, training, privatization and outsourcing.
